

Callerton Park

This project was one of a number financed under the Play Pathfinder Scheme. The design philosophy for the recreation area was to make play more adventurous for children, and to provide natural features for children to play on.

The project involved removing existing play equipment, constructing earth mounds and installing new play equipment.

Informal steps were formed in the side of the steep slope of a 2m high earth mound up to the top of a slide. Boulders, up to five tonnes in weight, were secured around the play area, including in the side of the earth mound.

The work was completed to a tight deadline during a very cold and extended winter period.
