

Heaton Spinney

The initiative to design play areas as adventure grounds was brought about on this site by using the natural topography as much as possible.

New play equipment was installed in existing slopes and on different levels. The play equipment included a timber climbing frame, a hexagonal swing and a slide.

To provide a more natural experience, a felled tree was installed, boulders of up to five tonnes in weight were secured around the recreation area, and earth mounds were constructed.

Safety was provided by play-grade sand and rubber matting play surfaces.
