

Regents Farm School Gosforth

The construction work included internal refurbishment of the existing building including electrical and mechanical works and externals to provide the following:

- Entrance canopy and ramp
- New front entrance area and extension of reception area
- Steps to existing hall entrance
- Family room
- External timber deck area with covered roof
- New store in existing hall
- Cleaners cupboard
- New toilet facilities
- Landscaping works

The project was within the boundary of the existing school, which remained open during most of the construction work. It was vital that safe access for pedestrians and vehicles was maintained at all times.

A strategy for interfacing with the school staff, children and general public was a key part of carrying out the works. The school staff were kept informed of progress, programme and deliveries to ensure forthcoming events were known and planned for to minimise disruption and risk.

Client	Newcastle City Council
